

Build Software with AI

saturngod

Who am I ?

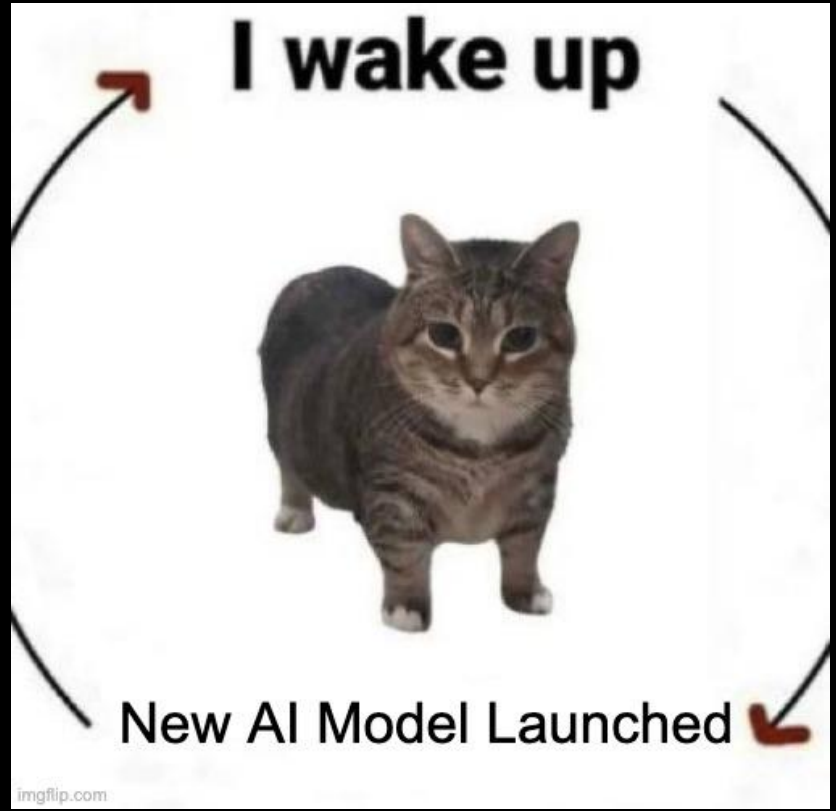

- Developer (Laravel, Swift , Flutter)
- Working at Bonjoy in The Woodlands, Texas, USA
- Creator of Rabbit Converter (Zawgyi to Unicode)
- Wrote books
 - Software Engineer
 - Developer Intern
 - Design Pattern
 - Programming Basic
 - Database Basic
- www.saturngod.net

Manual coding
as little as possible

Agents

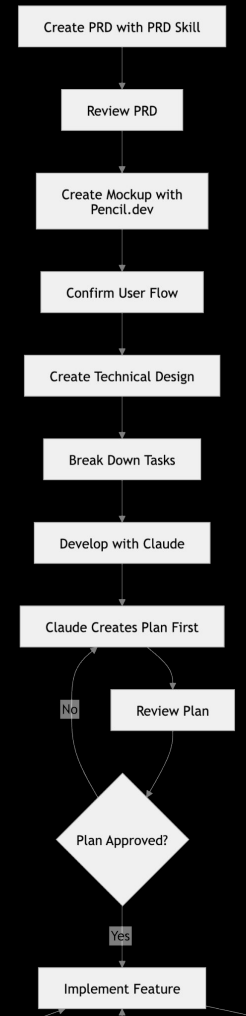

- Claude
- Codex
- Opencode

Workflow

We are using

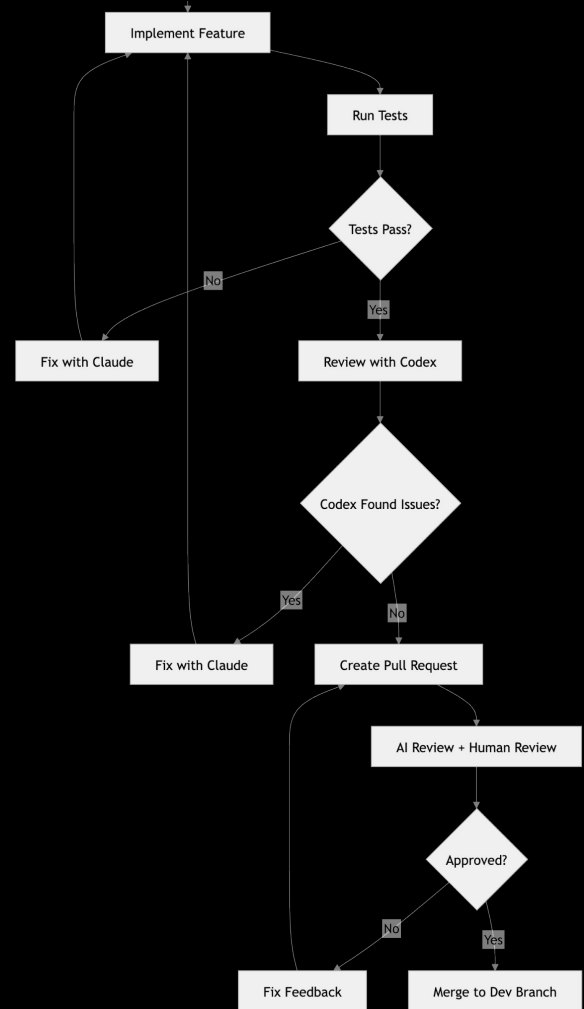

- Use Claude.md , Agents.md
- husky (git prehook)
- Use skills
- Laravel-boost MCP
- Pencil.dev
- Git worktree

Workflow

We are using

- Use Claude.md , Agents.md
- husky (git prehook)
- Use skills
- Laravel-boost MCP
- Pencil.dev
- Git worktree

Git Hook (Pre Commit, Pre Push)

- lint
- formatted style
- laravel pint
- Check standard (eg. supporting all languages string)

Claude.md Agents.md

- /init
- use multiple claude
- Multi projects one folder
 - Project A (Claude.md)
 - Flutter (Claude.md)
 - Backend (Claude.md)
 - Frontend (Claude.md)
- I always add in following line
 - Follow SOLID Principle
 - "Always respond in simple English, short and to the point."
- In ~/.zshrc
 - alias claude='claude --append-system-prompt="Always respond in simple English, short and to the point."'

Skills (.claude/skills , .agents/skills)

- generate PRD (template + skill)
- security checking
- pull request (template + skill)
- code review
- flutter riverpod
- pest-testing

Agents

- laravel developer
- flutter developer
- code reviewer

Skill vs Agent

- Skill is knowledge , AI will apply it
- Agent is worker
- PHP Developer has Laravel skill
- Flutter Developer has riverpod skill

Skills

/skills/code-review/SKILL.md

Code Review Skill

Rules

- Check for unused variables
- Flag missing error handling
- Suggest early returns to reduce nesting
- Keep comments short, one line per issue

Format

[FILE:LINE] issue – suggestion

Example: [auth.go:42] no error check – add ``if err  $\neq$  nil { return err }``

Agents

```
/agents/code-reviewer.md
```

```
# Code Reviewer Agent
```

```
## Instructions
```

1. Read /skills/code-review/SKILL.md
2. Read all changed files in the PR
3. Apply the rules from the skill
4. Output a review report

```
## Goal
```

Find bugs and bad patterns. Be concise.

```
$ claude --agent code-reviewer
```

Prompt

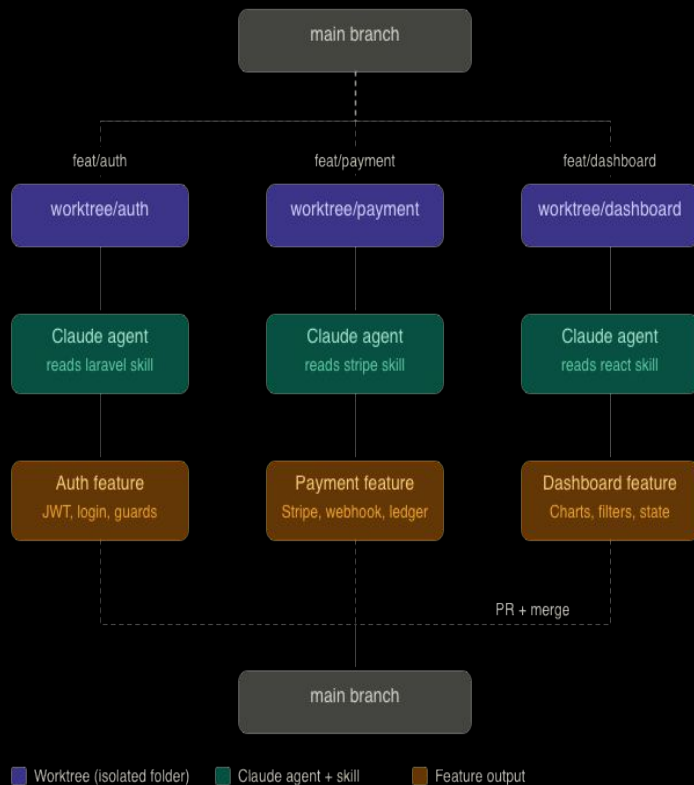

- Understand the domain and technical design
 - Why we did that ?
 - What we need to develop ?
 - What result do we want ?
- Plan mode
- review plan before process

Git Worktree

- `git worktree add ../feature-login feature/login`
- `git worktree remove ../feature-login`

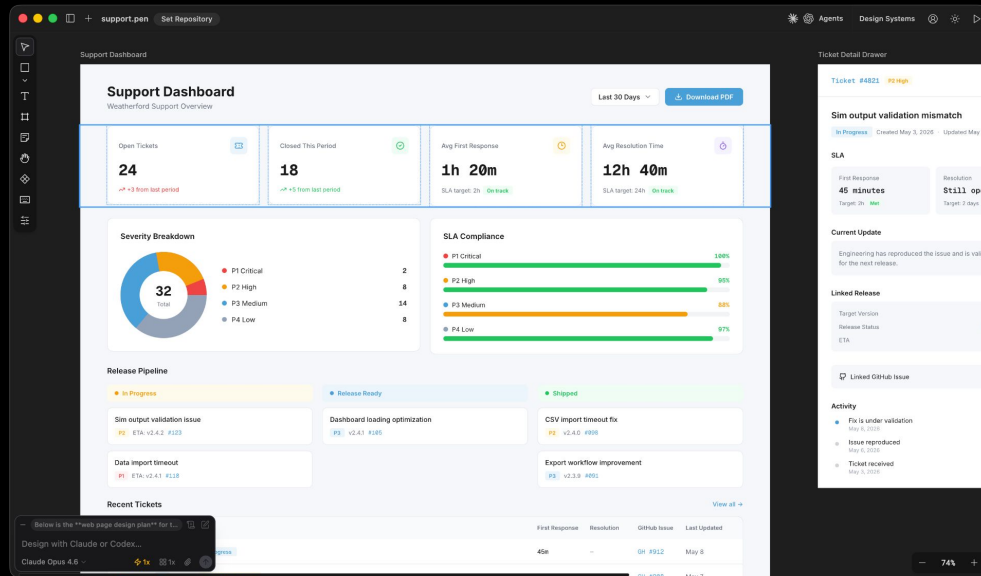

Multitask with worktree

- Develop two features at the same time
- useful for code review for pull request

Pencil.dev

- Good for mockup idea
- Good for design
- Still free to use
- MCP support

Web testing

- Pest Browser Test in Laravel
- Playwright For UI Test

PR & Code Review

- `git diff dev ... HEAD`
- use skill
- deepsec for security
- manual review
- max 800 lines changes
- break small for code review
- `feature/document/upload` , `feature/document/process` (dep on #xxxx)

Questions ?
